

Energy Efficient, Self-Sealing Start Collar

Dura-Tite Systems™ plastic take off collar has revolutionized the HVAC industry! DuraTite's collar was specifically designed to attach in seconds, eliminate installer injury and seal air tight.

The DuraTite Advantage

- **INSTALLS FASTER** - Pre-Install Flex-Duct!
- **REDUCES INJURY** - No tabs to bend back.
- **SEALS TIGHTER** - Greatly minimize air/energy loss.
- **2-SIDED GASKET** - Reduces extra sealant costs.
- **GREEN** building product.
- **FIRE RATED** for use in a plenum UL2043.
- 157 times **LESS CONDUCTIVE** than metal.
- **COST EFFECTIVE** alternative.
- **REPLACES** tab AND stick-on metal collars.

DuraTite™ VS. Metal

- No sharp edges
- Dent proof
- Lightweight
- Rust proof

MADE IN U.S.A.

Available in: 5", 6", 7", 8",
10" and 12" sizes
dampered and
damperless models.

ONE COLLAR

The DuraTite Collar can be used with 1", 1-1/2", 2" duct board and sheet metal trunk lines, and is sized for metal pipe and flexible ducting.

Duct Board
Trunkline

Sheet Metal
Trunkline

Pre-Install Flex Duct
(for faster installation)

Pre-attach DuraTite collars to your flex and climb the ladder once!

Quick Connect Collars

FASTER INSTALL

The DuraTite Collar creates a faster connection to both ductboard and sheet metal trunk lines. The DuraTite Collar features a double sided adhesive gasket, Zip Clips and pre-drilled sheet metal screw holes for attachment in seconds!

STAY IN PLACE DAMPER

The DuraTite damper design features a ratchet system which locks the damper in six different positions and an internal lip for a tight close. The damper handle sets off from the collar and can be either covered by the flex duct or metal pipe or left exposed depending on your installation preferences.

FULL LINE

The take off collar is just the first component in the DuraTite System line for all of your residential, light commercial and retrofit needs. Other energy efficient products are currently in development and will be available in the near future.

GREEN BUILDING PRODUCTS

The DuraTite Collar is the energy efficient and time saving alternative you've been waiting for greatly reducing air/energy loss while saving considerable installation time (based on method of sealing and installation). Current housing market inspection processes will reward tighter ducts with tax credits and energy-efficient trade-offs.

FIRE TESTED

The DuraTite Collar is UL 2043 Classified. Both the UL and NFPA 90A documents have clarified the applicability of UL 2043 for discrete products used in the air handling space. Additionally NFPA 90A was revised to state that UL 2043 is to be used to assess "other discrete products" – not only loudspeakers and recessed lighting fixtures.

The updated scope states that UL 2043 is the alternate test method used when UL 723 (E-84 Steiner Tunnel 25/50 test) is not applicable and that this standard is no longer limited to just electrical products.

CODE ACCEPTED

DuraTite collars are currently being installed across the U.S. and accepted by code in most markets. The authority having jurisdiction should be referenced to determine what law ordinance or code should apply when using the DuraTite Collar. The DuraTite Collar meets all minimum code requirements in its design.
